

The 30-Day Code-Assist Pilot

When an AI coding agent merges, deploys, or fixes a pipeline — can you prove why it was allowed?

Summit is the evidence layer for agentic AI. Every consequential agent action becomes a cryptographically signed, replayable Decision Receipt — what the agent did, on what evidence, what it ruled out, and under whose authority — sealed in a hash chain anyone can verify independently.

ONE FLOW, INSTRUMENTED

A single consequential agent flow — e.g. fix a CI/CD pipeline, or a guarded merge / deploy. Signed receipt per action, including escalations the agent withholds for a human.

ASSESSOR-READY EVIDENCE

Audit & Accountability pack: NIST 800-171 / CMMC L2 controls 3.3.1 / 2 / 3 / 7 / 8 / 9 — the family customers fail most — mapped to receipt evidence you can hand an assessor.

INDEPENDENT VERIFICATION

The chain verifies without trusting the platform, the agent, or Summit. Tampering breaks it, visibly. Our live production chain audit is public — always on, checked in real time.

HOW THE 30 DAYS RUN

Week 1 Connect & instrument — access, first live receipt from your flow, consequential-action rules agreed.

Weeks 2–3 Operate — normal work, weekly 30-min proof reviews, a tamper test you drive yourself.

Week 4 Prove — audit walkthrough with your compliance lead, full pilot pack delivered, conversion decision.

COMMERCIALS

Fixed fee · 30 days · design-partner rate. No amount is published here: pilot scope, schedule, pricing, and terms are confirmed in a one-page written order form before work begins. To start: name a pilot owner and one flow — day 1 on signature.
